

ANALYSES & TECHNOLOGY FOUNDATION

[SEPTEMBER 9, 2015](#) [ADMIN](#) [LEAVE A COMMENT](#) [EDIT](#)

With SAP Landscape Transformation 2.0 you can analyze your system landscape to discover optimization potential and prepare for a landscape transformation project. The transformation platform provides generic functions and technologies as a unique foundation for all SAP transformation solutions.

Work center

• Central point of access to manage and document your transformation projects

• Provides access to project methodology, analyses, and the process tree to execute the technical transformation **Analyses**

• Scenario-independent analyses & scenario-specific analyses

Generic functions

• Process tree with phase concept and status management

• Parameter interface framework & mapping engine

• Number conversion engine

Transformation platform

• Conversions & migration technology: Transforms data within one SAP system or from SAP sender to receiver system(s) changing data, incl. all historical data on database level

• Reorganizations: Key date-based data transformation through standard SAP interfaces

• Object-based transformation: Highly flexible platform to transform data of dedicated business objects or processes
