

ONE INTEGRATED SOLUTION SUPPORTING ALL YOUR KEY PROCESSES

[SEPTEMBER 25, 2015](#) [ADMIN](#) [2 COMMENTS](#) [EDIT](#)

Unlike other business software on the market, an SAP Business All-in-One solution helps you manage your most important processes in a single integrated application, as shown in the figure.

It allows

you to start with what you need now and add what you need later.

An SAP Business All-in-One solution includes the following core functionality:

- Enterprise resource planning – Effectively manage financials, sales and service, procurement and logistics execution, product development and manufacturing, human capital management, corporate services, and business analytics
- Support for best practices – Benefit from industry-specific functionality and business processes based on SAP and SAP partners' experience – spanning the last 35 years – with customers in more than 25 industries worldwide
- Technology platform – Lay a foundation to quickly and cost-effectively add on to your existing solution as your business grows and your needs change Additional integrated functionality is available for SAP Business All-in-One solutions at a low fee, including:
 - Customer relationship management – Efficiently conduct all aspects of your customer relationships – from marketing to sales to service.
 - Supplier relationship management – Optimize procurement and sourcing to control costs
 - Business intelligence – Gain insight and improve decision making with tools for financial and operational reporting and analysis

Enterprise Resource Planning

SAP Business All-in-One solutions are designed to meet the needs of growing small businesses and midsize companies and are based on the SAP ERP application, an industry-leading product. Each integrated solution includes comprehensive functionality to manage all aspects of your

operations. It delivers role-based access to business application data and analytical tools. Your company can use it across the following areas:

- Accounting and financials – Create accurate financial statements and integrate all operative transactions throughout the company
- Sales and service – Meet customer demands, support the entire order-to-cash process, and provide after-sales support
- Purchasing and logistics execution – Control costs and manage inbound and outbound logistics cycles – including drop shipments
- Inventory management – Track the quantity, value, and movement of inventory in real time
- Human capital management – Manage staffing changes and streamline payroll processes
- Product development and manufacturing – Improve the product lifecycle process and manufacturing operations
- Reporting and analytics – Plan, measure, and control organizational processes
- Corporate services – Lower administrative costs, increase transparency of operations, and improve adherence to corporate, legal, and regulatory requirements
