

SAP BUSINESS BYDESIGN INTEGRATION

DECEMBER 7, 2017 [KAUSTUBH SATPUTE](#) [LEAVE A COMMENT](#) [EDIT](#)

SAP Business ByDesign integration SAP Business ByDesign is an cloud-based on-demand business management solution designed for small or midsize businesses. SAP Business byDesign is a full-featured cloud ERP software solution that allows customers to enjoy the power of large-scale business applications without the need for IT infrastructure.

SAP Business ByDesign integration SAP Business ByDesign can also be used by subsidiaries of larger companies to take advantage of head office resources, while keeping their flexibility. In this case an integration with on-premise solutions is almost always necessary.

SAP Business ByDesign integration SAP Business ByDesign You have two options to connect your on-premise system to SAP ByDesign; via SAP PI or via SAP HCI. Both options can be monitored by tools in SAP Solution Manager. Additionally we can monitor exceptions in SAP ByDesign itself via a SOAP API.

SAP Business ByDesign

11 THINGS THAT ARE GREAT ABOUT SAP BUSINESS BYDESIGN

Built in analytics

SAP BYD comes with built in business analytics powered by Hana. Usually with ERP products you need to buy separate product for analytics.

Built with using SAP ECC experience

This one is kind of hard to explain but after a while you start to feel that same people have built it who has built ECC. This means that there are many similarities but they have also taken the experience and made BYD better and more convenient.

Workflows

BYD comes with good built in workflow automation. You can assign tasks to other people and configure the system so everyone receives work assignments automatically. If you create a service order the service worker will get notification on their screen and know what to do.

Sourcing process

Sourcing process is by far the best I have seen in BYD. You want to buy something, you ask suppliers for quotes, compare the quotes, ask for new quotes, accept the quote etc. Everything works well and is easy to use.

API's and web services

There are [231 Web services](#) available in version 1611. This means that almost everything in BYD is accessible from outside BYD and you can also send back data or call out BYD functions.

Integration scenarios

There are [70 integration scenarios](#) available in version 1611. They include scenarios for integration SAP BYD with third party applications, on-premise applications etc. For example you can integrate SAP BYD out-of-box with payroll system, e-commerce solutions, point-of-sale applications, engineering applications etc. Read more [here](#).

Excel integration

All the reports and analytics in SAP BYD can be opened in Excel as well with SAP BYD free excel plugin. You can query the data straight from BYD system very easily.

Updates 4 times a year

SAP BYD receives technology and feature updates every quarter.

Idea forum

SAP BYD has idea forum for all the users where they can post their wishes and then the community can up-vote the idea and if it has enough supporters, SAP will consider developing the idea.

Document flow

One thing that's adopted from ECC is the document flow. This is something that is extremely useful. You will see from your quotation till your G/L postings in accounting and everything in between what has happened with your documents. No need to query and search for order related information from different views.

Its a complete solution

SAP BYD basically is: ECC, BW, CRM, SRM, SCM. You will get all the business applications you will need with only one software.
