

SAP HANA CLOUD PLATFORM

DECEMBER 7, 2017 KAUSTUBH SATPUTE LEAVE A COMMENT EDIT

SAP HANA Cloud Platform, the in-memory Platform-as-a-Service offering from SAP, enables customers and developers to build, extend, and run applications on SAP HANA in the cloud. It provides access to a development environment in the cloud. The platform includes a comprehensive set of services for integration, enterprise mobility, collaboration, and analytics.

SAP Cloud Platform has different options to integrate with on-premise systems, most of them we are already able to fully monitor, like SAP HCI and SAP HCI for DS. Monitoring of the SAP Cloud Connector is planned.

SAP HANA Cloud Platform

SAP Cloud Platform contains many services. For a better overview, they were assigned to several categories. The following list contains all the categories defined by SAP:[\[22\]](#)

- Collaboration
